LemonLDAP::NG 1.2
Clément OUDOT

New features of LemonLDAP::NG 1.2
About the speaker
Clément OUDOT

- LDAP engineer since 2003 in LINAGORA company, with experiences in SUN/Oracle to OpenLDAP migration
- LinID Dream Team Manager [http://linid.org](http://linid.org)
- Leader of LDAP Tool Box project [http://ltb-project.org](http://ltb-project.org)
- Leader of LemonLDAP::NG project [http://lemonldap-ng.org](http://lemonldap-ng.org)
LemonLDAP::NG
Components

- **Portal**: authentication process, user interaction, application menu, password change form
- **Manager**: configuration interface, sessions explorer
- **Handler**: Apache agent, manage access authorizations
- Perl, only Perl, just Perl
- Relies on Apache and mod_perl
Follow the white request
Demo mode

- Default mode at installation
- Provide dummy accounts
- One account has administration privileges
Demo mode
Login history

- Keep in a persistent session success and failed authentication
- The login history is available to administrators through sessions explorer, and can be displayed to users in the portal
Floating menu

- Add HTML code on the fly on protected applications
- Display portal and logout links
- Easy to customize!
Maintenance mode

- Dismiss an application without touching Apache configuration
- Standard HTTP code 503
- All nodes of a cluster disabled at the same time!
Radius authentication

- Standard authentication mode with login and password
- Compatible with Google Authenticator
The end... almost
Thanks
