Self Service BI with SpagoBI 4

Virginie Pasquon - BI Consultant - Engineering Group

Self Service BI allows business users to access and work with information without the IT department's involvement. This does not only concern enterprise data but also private and unstructured data, stored on the final user's devices. SpagoBI 4 extends the support of Self Service BI scenarios from the agile development of analytical documents beyond enterprise boundaries bringing it into the Open Data and the private domain as well. The Self Service by functionality is presented in the context of a full revision of the SpagoBI user interface towards an intuitive and appealing experience.
